

“Tri-Tek will assist with improving your well being and posture”

## Key Features & Benefits of Tri-Tek Pressure Reduction Technology:

- In most office chairs the body weight is spread throughout the seat pan thus restricting blood flow to the lower extremities. Tri-Tek reduces pressure under the thigh by centralising the weight to under the ischial tuberosities<sup>1</sup> (sitting bones) where there is less tissue and arteries.
- The tear drop shape<sup>2</sup> internal foam cores placed under the ischial tuberosities are contoured internally to 'flex' which balances the weight of the user to under the ischial tuberosities therefore promoting a healthy 'S' curve in the spine.
- The unique contouring of the seat and waterfall front<sup>3</sup> acts as a forward seat tilt without feeling like you are slipping out of the chair. This assists to open the pelvis and balance your head, spine and pelvis and promote and healthy 'S' curve in the spine.
- Moulded foam seat with anti-bacteriaside.
- ^Patented design
